## Skills

Software development standards - Source, version control: GitHub - Object-Oriented Programming - HTML5 - CSS3 - JavaScript - React

## Work Experience

### MindHome, West Sacramento, CA

#### Web Developer

08/2024 - Present

#### Web Development Intern

05/2023 – 08/2024

- Manage website updates for MindHome, instituting assigned changes to over 25% of total content, collaborating with design team to improve visual appeal, overall user experience
- Formulate CSS and HTML, and Liquid code alterations on 25% of the company website on Shopify's platform
- Facilitate weekly cadence of user story presentations to senior leadership, showcasing recent achievements, upcoming goals, increasing visibility of team's impact by 50%

## Projects

### Media Website

- Constructed with React.js, Tailwind CSS, TypeScript, and Next.js; integrated 5 screens with smooth navigation
- Optimized for fast loading speeds, using 3 API routes to handle backend functionality
- Implemented responsive design principles, including using CSS flexbox and grid, relative units and 2 main breakpoints

### E-Commerce Website

- Coded and launched robust e-commerce platform using React.js, React Router, and Tailwind CSS, showcasing over 30 potential products
- Deployed login feature utilizing RESTful API for authentication, with 1 set of test credentials provided, possibly enhancing system security against unauthorized access attempts
- Devised implementation of link state functionality for efficient sorting of 4 item categories, to improve user engagement on digital platform

### Dog Breed Information Website

- Plotted dog information website using React.js, React Router, and Tailwind CSS; created individual pages for 172 breeds, resulting in comprehensive and user-friendly browsing experience for dog enthusiasts
- Leveraged JavaScript to craft user-friendly breed list with pagination across 15 pages, streamlining content accessibility and enabling efficient browsing for users
- Produced 1 table containing flexible number of rows and columns using Tailwind utility classes for each breed

### Food Recipe Website

- Implemented 3 main pages and intuitive search functionality for effortless navigation, enhancing user engagement
- Employed React Router 6 to create efficient routing paths, facilitating smooth transitions between pages and ensuring seamless user journey
- Engineered feature enabling users to explore randomly generated meal options, pointing to 1 randomly generated meal at once retrieved using API call
