Gabe Hollifield – Web Development Intern

West Sacramento, CA | (210) 584-0879 | gholl467@gmail.com | github.com/gabholli | linkedin.com/in/gabe-hollifield | Personal Website: gabholli.github.io

Skills

Software development standards - Source, version control: GitHub - Object-Oriented Programming - HTML5 - CSS3 - JavaScript - React.js

Work Experience

Web Development Intern, MindHome, West Sacramento, CA **05/2023 – Present**

- Manage website updates for MindHome, instituting assigned changes to over 25% of total content, collaborating with design team to improve visual appeal and overall user experience
- Spearhead the implementation of CSS and HTML code alterations on 25% of the company website on Shopify's platform
- Facilitate weekly cadence of user story presentations to senior leadership, showcasing recent achievements, upcoming goals, and increasing visibility of team's impact by 50%

Academic Projects

JavaFX Appointment Scheduling System

- Plotted local desktop application for scheduling appointments, maintaining customer records from ground up, based broadly on View-Model-Controller pattern, containing 6 packages
- Incorporated Java with JavaFX libraries and MySQL connector driver to process functionality for desktop graphical user interface with locally hosted database of 6 tables
- Finalized program using only 25% of projected code needed with actual Java written limited to below 2,000 lines, and auto-generated code totaling about 13,000

Student Scheduler Mobile App

- Computed in Java and Room database framework with fewer than 2,000 lines to keep track of simulated terms, courses, assessments for students
- Assembled program composed of 8 screens, associated entity, and adapter files
- Structured each screen with differing content including buttons, text fields for data entry, lists for deleting and adding to 3 different entities

Inventory Management System

- Produced Java-based inventory management system designed to keep track of products and parts within 2 main tables, 5 separate sections, shown within simple graphical user interface
- Conceptualized value of inheritance by creating main abstract parts class and 2 derived sub-classes

Student Roster

- Programmed in C++ hypothetical school student roster based on array of 5 students, narrowed down into 6 sections with varying amounts of information
- Gained proficiency in object-oriented programming by implementing 3 header files with corresponding content

Education

Western Governors University **07/2022**

Bachelor of Science in Software Development

- Graduated after producing 5 academic programming applications
- Completed coursework in data structures, algorithms, Java, Python, and C++
- Launched projects with MySQL database functionality and performed SQL queries

San Antonio College **05/2012**

Associate of Arts in Liberal Arts

- Studied subjects ranging from math and history to science and literature
- Acquired improved reading comprehension and writing ability

Certifications

CompTIA A+ - CompTIA Project+ - ITIL Foundation
